

## ZOTEFOAMS

**PEBAXFOAM<sup>®</sup>, our ultra-lightweight high performance foam used by Pelé Sports in sockliner application.**

Pelé Sports – the new global football brand from soccer legend, Pelé - has unveiled a ground breaking football boot for SS 2012, the result of years of ergonomic research and footwork analysis. For the first time ever, the ultra light Trinity 3E boot has harnessed the ability to perform a dual task: maximising a player's game & speed potential and actually training your muscles as you play. This has been achieved through extensive research and testing as well as a combination of lightweight materials, unique support and innovative stud geometry.

The Trinity 3E's success has already been rewarded by the ISPO BrandNew Award for Footwear.

*“In the early stages of the Pelé Sports Trinity 3E speed boot project we knew we had to find a superior sockliner material that possessed lightweight properties coupled with advanced physical properties. Naturally we turned to Zotefoams and their PebaxFoam<sup>®</sup> product which allowed us to save over 30% mass compared to a traditional sockliner whilst also achieving an improved comfort factor rating for the player. And with their continued technical input and superb customer service we look forwards to pushing the boundaries still further in our next generation of footwear with their products.”*

*Darryl Cassingham, Head of Research - Pelé Sports.*
